

Warehouse Wizard System Tour

Where the work your team already does
lives in the system

This is a tour, not a test

FAMILIAR WORK

Start with what happens on your floor

SHARED RECORD

See where the system remembers it

CLEAR OWNERSHIP

Know who normally works in each area

VISIBLE HANDOFF

See who receives the work next

Four neighborhoods make the system easier to remember

SEE THE DAY

Dashboard · Help Center

SET UP THE FLOOR

**Warehouses · Clients · Zones · Locations ·
Products · Packaging · Setup**

MOVE THE STOCK

**Receiving · Put-Away · Inventory · Picks ·
Transfers · Moves · Counts · Status**

KEEP THE TEAM INFORMED

**Reports · Users · System Log · Email Log ·
Settings**

Dashboard

**WHAT LIVES
HERE**

Start from live inbound, storage, outbound, capacity, and exception signals.

WHO USUALLY WORKS HERE Managers · Supervisors · Clerks · Operators

A NORMAL VISIT LOOKS LIKE

1. Select active warehouse and Floor, Dock, or Office view
2. Read open work and exceptions
3. Open the source module for live detail

WHAT HAPPENS NEXT

Manager sets priority; operator opens the assigned queue.

WATCH-OUT

Do not use an aggregate tile as evidence for a pallet decision.

Warehouses

WHAT LIVES HERE

Define the top-level physical facilities used by all warehouse activity.

WHO USUALLY WORKS HERE Admins · Warehouse Managers

A NORMAL VISIT LOOKS LIKE

1. Create one stable unique facility code
2. Maintain identity, location context, status, and cool capability
3. Confirm the facility exists physically as configured

WHAT HAPPENS NEXT

Build zones and locations before releasing work.

WATCH-OUT

Do not duplicate codes or disable a facility with dependent work.

Clients

WHAT LIVES HERE

Identify who owns 3PL stock and which commercial handling rules apply.

WHO USUALLY WORKS HERE Admins · Warehouse Managers

A NORMAL VISIT LOOKS LIKE

1. Maintain short stable client codes
2. Set ownership, expiry, and mixed-stock controls
3. Deactivate rather than delete historical context

WHAT HAPPENS NEXT

Products and Receiving select the verified owner.

WATCH-OUT

Never receive stock under a guessed client.

Zones

WHAT LIVES HERE

Group space by workflow purpose and temperature class.

WHO USUALLY WORKS HERE Admins · Warehouse Managers

A NORMAL VISIT LOOKS LIKE

1. Separate Receiving, Picking, Dispatch, Quarantine, Bulk, Cool/Frozen uses
2. Set temperature and no-normal-stock flags
3. Verify zone purpose against the floor

WHAT HAPPENS NEXT

Generate exact bin locations and labels.

WATCH-OUT

Do not mix staging, dispatch, and quarantine rules for convenience.

Bin Locations

**WHAT LIVES
HERE**

Define exact cells used for storage, picks, moves, counts, and capacity.

WHO USUALLY WORKS HERE Admins · Warehouse Managers

A NORMAL VISIT LOOKS LIKE

1. Maintain aisle, bay, level, position/depth, sequence, and capacity
2. Print exact-cell and bay labels
3. Keep active status and physical rack aligned

WHAT HAPPENS NEXT

Operators consume the labels in execution modules.

WATCH-OUT

Never change a code without replacing the floor label.

Products

**WHAT LIVES
HERE**

Define SKU identity, owner, rotation, tracking, temperature, and handling.

WHO USUALLY WORKS HERE Admins · Managers · Inventory Clerks

A NORMAL VISIT LOOKS LIKE

1. Create/import verified SKU, name, owner, and barcode
2. Set FIFO/FEFO, lot/expiry, and temperature controls
3. Hide discontinued items; preserve history

WHAT HAPPENS NEXT

Create the correct Packaging Profile before Receiving.

WATCH-OUT

No guessed SKUs, duplicate barcodes, or unknown rotation values.

Packaging Profiles

**WHAT LIVES
HERE**

Connect each/case/pallet units and barcodes to physical receiving quantities.

WHO USUALLY WORKS HERE Admins · Managers · Inventory Clerks

A NORMAL VISIT LOOKS LIKE

1. Configure pack sizes, dimensions, weights, and barcodes
2. Keep one appropriate default profile
3. Verify values against the physical pack

WHAT HAPPENS NEXT

Receiving interprets scans and quantities from the profile.

WATCH-OUT

Multiple defaults or incorrect units-per-package create downstream defects.

Receiving

**WHAT LIVES
HERE**

Create receipt, pallet identity, traceability, labels, and Put-Away work.

WHO USUALLY WORKS HERE Admins · Managers · Inventory Clerks

A NORMAL VISIT LOOKS LIKE

1. Warehouse/container/PO → product scan + commit
2. Physical total → qty/pallet → pallets → expiry/lot
3. Verify once → receive → print labels → release Put-Away

WHAT HAPPENS NEXT

Each labeled pallet has a Put-Away task or identifiable Saved Draft.

WATCH-OUT

Do not guess SKU/count, skip the commit arrow, or post offline.

Put-Away

**WHAT LIVES
HERE**

Store one identified pallet in one exact eligible cell and make it available.

WHO USUALLY WORKS HERE Admins · Managers · Clerks · Operators

A NORMAL VISIT LOOKS LIKE

1. Select task and scan pallet
2. Scan exact location or select exact bay cell
3. Verify safety/capacity/temperature → place → confirm once

WHAT HAPPENS NEXT

Task clears and Inventory Search shows the stored location.

WATCH-OUT

A bay code is not final; never force a blocked or stale destination.

Inventory Search

WHAT LIVES HERE

Provide the live pallet truth: quantity, status, owner, lot, location, and history.

WHO USUALLY WORKS HERE All approved operational roles

A NORMAL VISIT LOOKS LIKE

1. Search pallet, SKU, lot, warehouse, zone, or location
2. Open detail and movement history
3. Compare the record with the physical floor

WHAT HAPPENS NEXT

Verified facts justify the next pick, move, transfer, status, or count action.

WATCH-OUT

Do not act from memory, paper, dashboard totals, or hidden filters.

Pick Lists

**WHAT LIVES
HERE**

Plan, release, assign, and execute outbound whole-pallet work.

WHO USUALLY WORKS HERE Managers · Supervisors · Operators

A NORMAL VISIT LOOKS LIKE

1. Manager verifies demand, stock, staging, owner, and due time
2. Release executable whole-pallet tasks
3. Operator scans assigned location + pallet → confirms → stages

WHAT HAPPENS NEXT

Completed pallets move to the directed outbound lane.

WATCH-OUT

No short release, normal pallet split, or forced quantity mismatch.

Transfers

WHAT LIVES HERE

Move pallet identity across warehouse boundaries with signed handoffs.

WHO USUALLY WORKS HERE Managers · Clerks · Supervisors · Dispatch Drivers

A NORMAL VISIT LOOKS LIKE

1. Create and stage the verified pallet/route
2. Driver signs after physical departure
3. Destination receives and immediately triggers Put-Away

WHAT HAPPENS NEXT

Destination Receiving and Put-Away finish the journey.

WATCH-OUT

Do not sign before departure or strand received stock in a lane.

Location Moves

**WHAT LIVES
HERE**

Relocate a pallet inside the same warehouse with full movement history.

WHO USUALLY WORKS HERE Managers · Clerks · Supervisors · Operators

A NORMAL VISIT LOOKS LIKE

1. Scan pallet and verify live state
2. Scan/type/Browse bays; select exact eligible cell
3. Move physically → confirm once → verify Inventory Search

WHAT HAPPENS NEXT

Inventory now points to the exact destination.

WATCH-OUT

Different warehouse means Transfer, not Location Move.

Cycle Counts

**WHAT LIVES
HERE**

Run blind physical counts and controlled variance review.

WHO USUALLY WORKS HERE Managers · Clerks · Supervisors · Operators

A NORMAL VISIT LOOKS LIKE

1. Manager scopes and assigns CCT work
2. Operator verifies location and submits the true physical count online
3. Supervisor reviews threshold variance, notes, and exceptions

WHAT HAPPENS NEXT

Approved corrections update stock and produce root-cause work.

WATCH-OUT

Do not count the expected value or approve stale post-reconnect state.

Statuses

WHAT LIVES HERE

Keep Available, Hold, Quarantine, Damaged, and Missing stock visible and controlled.

WHO USUALLY WORKS HERE Managers · Supervisors · Inventory Clerks

A NORMAL VISIT LOOKS LIKE

- 1. Verify pallet and physical condition
- 2. Choose only the justified status and enter a reason
- 3. Add System Log ownership when follow-up is required

WHAT HAPPENS NEXT

Status controls availability and the next authorized action.

WATCH-OUT

Do not mark Damaged/Missing on assumption or release without verification.

Reports

WHAT LIVES HERE

Show management snapshots for stock, occupancy, expiry, movement, and variance.

WHO USUALLY WORKS HERE Admins · Managers · Supervisors · Clerks

A NORMAL VISIT LOOKS LIKE

1. Review the relevant current report
2. Identify the material trend or bottleneck
3. Drill into the operational module or Inventory Search

WHAT HAPPENS NEXT

Assign an action owner and verify later performance.

WATCH-OUT

Reports do not replace live transactional detail.

Users & Roles

WHAT LIVES HERE

Create, approve, authorize, badge/PIN-enable, disable, and audit access.

WHO USUALLY WORKS HERE Admins

A NORMAL VISIT LOOKS LIKE

1. Create/approve the user
2. Assign least privilege and issue approved credentials
3. Test access; hide role or disable profile non-destructively

WHAT HAPPENS NEXT

Reassign open work before access changes.

WATCH-OUT

No shared credentials, excessive roles, deletion, or mid-task disablement.

System Log

WHAT LIVES HERE

Track operational issues, RF alerts, support notes, ownership, and resolution.

WHO USUALLY WORKS HERE Admins · Warehouse Managers

A NORMAL VISIT LOOKS LIKE

1. Review evidence and severity
2. Assign the correct owner and investigate underlying records
3. Resolve only after the physical/system condition is corrected

WHAT HAPPENS NEXT

Quality, client, IT, or warehouse follow-up reaches accountable closure.

WATCH-OUT

A log note does not replace the required inventory/status transaction.

Email Log

WHAT LIVES HERE

Show outbound message attempts, recipients, templates, status, and errors.

WHO USUALLY WORKS HERE Admins

A NORMAL VISIT LOOKS LIKE

1. Find the user/message attempt
2. Read recipient, template, delivery state, and error
3. Correct the cause; retry or escalate provider/DNS/suppression

WHAT HAPPENS NEXT

Confirm delivery before telling the user it succeeded.

WATCH-OUT

Do not retry repeatedly without reading the failure.

Settings

WHAT LIVES HERE

Group Warehouse Structure, Users & Roles, release guidance, setup, and controlled administration.

WHO USUALLY WORKS HERE Admins · Warehouse Managers

A NORMAL VISIT LOOKS LIKE

1. Open the relevant tab only
2. Make the narrow intended configuration change
3. Verify downstream labels, access, and operational behavior

WHAT HAPPENS NEXT

Return to the affected module and prove normal work still works.

WATCH-OUT

No reset without a rebuild plan or structure change without labels.

Help Center

**WHAT LIVES
HERE**

Provide current contextual and searchable guidance across the system.

WHO USUALLY WORKS HERE All approved users

A NORMAL VISIT LOOKS LIKE

1. Open contextual Help from the current module
2. Review key actions, mistakes, and linked articles
3. Search by workflow, module, error, or operational term

WHAT HAPPENS NEXT

Return only when the normal next action is clear; escalate dead ends.

WATCH-OUT

Do not rely on an outdated printout or one exact search phrase.

Setup Wizard

WHAT LIVES HERE

Create or extend facilities, zones, and generated bin locations from a reviewed design.

WHO USUALLY WORKS HERE Admins · Warehouse Managers

A NORMAL VISIT LOOKS LIKE

1. Define facilities → zones → location rules
2. Review totals and codes before creation
3. Create → print/install labels → verify Warehouse Structure

WHAT HAPPENS NEXT

Prepare products/packaging, then release operational work.

WATCH-OUT

It is not a routine correction tool after go-live; never run without the physical plan.

A normal day moves through the system just as it moves across the floor

One pallet identity · clear handoff · live verification

Which part of the system would you reach for?

DECISION 1

Same warehouse relocation? → Location Moves

DECISION 2

Different facility? → Transfers

DECISION 3

Unknown SKU? → Products + Packaging

DECISION 4

Short pick pallet? → Inventory + Status + System Log

DECISION 5

Unreadable label? → Verify, then reprint same identity

DECISION 6

Rising quarantine? → Dashboard/Reports, then Status detail

Your team knows the warehouse. The system keeps that knowledge visible.

- System Tour — where familiar work lives
- End-to-End deck — follow one pallet together
- WW-UM-001 — detailed reference when needed
- In-app Help Center — guidance beside the live task

Orientation tells you where. Competency proves you can do the work.
